

ABSTRACT OF THE DISCLOSURE

A urethane (meth)acrylate oligomer which has a low viscosity and gives a flexible cured product having a low surface tackiness, is provided. It is obtainable by  
5 reacting a polyol component comprising a polyoxyalkylene polyol which has from 2 to 4 hydroxyl groups, a hydroxyl value  $V_{OH}$  (mgKOH/g) of from 5 to 115 and a total degree of unsaturation  $V_{US}$  (meq/g) satisfying  $V_{US} \leq$   
( $0.45/V_{OH}$ )+0.02, with a polyisocyanate compound and a  
10 hydroxylated (meth)acrylate compound.
